WATER SUPPLY OUTLOOK FOR IDAHO

Prepared by

U. S. DEPARTMENT of AGRICULTURE ★ SOIL CONSERVATION SERVICE

Collaborating with

IDAHO STATE DEPARTMENT OF WATER ADMINISTRATION

Data included in this report were obtained by the agencies named above in cooperation with Federal, State and private organizations listed inside the back cover of this report.

AS OF
APR. 1, 1972

Most of the usable water in western states originates as mountain snowfall. This snowfall accumulates during the winter and spring, several months before the snow melts and appears as streamflow. Since the runoff from precipitation as snow is delayed, estimates of snowmelt runoff can be made well in advance of its occurrence. Streamflow forecasts published in this report are based principally on measurement of the water equivalent of the mountain snowpack.

Forecasts become more accurate as more of the data affecting runoff are measured. All forecasts assume that climatic factors during the remainder of the snow accumulation and melt season will interact with a resultant average effect on runoff. Early season forecasts are therefore subject to a greater change than those made on later dates.

The snow course measurement is obtained by sampling snow depth and water equivalent at surveyed and marked locations in mountain areas. A total of about ten samples are taken at each location. The average of these are reported as snow depth and water equivalent. These measurements are repeated in the same location near the same dates each year.

Snow surveys are made monthly or semi-monthly from January 1 through June 1 in most states. There are about 1900 snow courses in Western United States and in the Columbia Basin in British Columbia. Networks of automatic snow water equivalent and related data sensing devices, along with radio telemetry are expanding and will provide a continuous record of snow water and other parameters of key locations.

Detailed data on snow course and soil moisture measurements are presented in state and local reports. Other data on reservoir storage, summaries of precipitation, current streamflow, and soil moisture conditions at valley elevations are also included. The report for Western United States presents a broad picture of water supply outlook conditions, including selected streamflow forecasts, summary of snow accumulation to date, and storage in large reservoirs.

Snow survey and soil moisture data for the period of record are published by the Soil Conservation Service by states about every five years. Data for the current year is summarized in a West-wide basic data summary and published about October 1 of each year.

PUBLISHED BY SOIL CONSERVATION SERVICE

The Soil Conservation Service publishes reports following the principal snow survey dates from January 1 through June 1 in cooperation with state water administrators, agricultural experiment stations and others. Copies of the reports for Western United States and all state reports may be obtained from Soil Conservation Service, Western Regional Technical Service Center, Room 209, 701 N. W. Glisan, Portland, Oregon 97209.

Copies of state and local reports may also be obtained from state offices of the Soil Conservation Service in the following states:

WATER SUPPLY OUTLOOK for IDAHO

GENERAL SUMMARY FOR APRIL 1, 1972

The water supply outlook for 1972 is good to excellent throughout Idaho. Forecasts of streamflow for major drainages vary from average runoff for the Little Wood River to a high of 195% of normal for the Bear River at Harer. Forecasts for smaller drainages vary from 115% of average for the Cub River near Preston to over 200% of normal for Montpelier Creek and the Inflow to Oakley Reservoir.

Snowfall during March was below normal throughout the state; however, total winter accumulation in general is above average. Snowpack water content on the major watersheds ranges from average on the Lost Rivers to a high of 155% of normal on the Portneuf River. A few small, low elevation drainages are well below normal in snow-water equivalent, varying from 40% of average on Fish Creek to 75% on the Priest and Little Wood Rivers.

Valley precipitation ranged from slightly below normal on the Snake River Plain to well above average on all north Idaho drainages. March temperatures were above normal throughout Idaho varying from near normal in the north central prairies to well above average in the eastern and north-eastern areas. Warm temperatures caused early season snowmelt in lower and middle elevation areas, resulting in considerable runoff which would normally occur later in the spring.

Streamflow averaged higher than for any previous March of record in many rivers and was near the maximum of record for the month in many others. New maximums for the month were recorded at the following index stations: Salmon River at Whitebird, Coeur d'Alene River at Enaville, Clearwater River at Orofino, and Snake River near Heise and at Weiser. Flow has not been exceeded in St. Joe River at Calder since 1934, in Boise River above Reservoirs since 1910 and has been exceeded only twice in 59 years of record in Weiser River near Weiser.

Water storage in reservoirs for power in north Idaho was above average. Storage for irrigation in south Idaho was below average because space was being evacuated to provide for expected high flows during the snowmelt runoff period. All major reservoirs are expected to be filled for the start of irrigation. The Oakley and Salmon Falls Reservoirs may fill this season for the first time on record.

Agencies and Organizations Cooperating in Idaho Snow Surveys

GOVERNMENT AGENCIES

Canada:

Department of Lands, Forests, and
Water Resources, British Columbia
Department of Resources and Development,
Water Resources Division

States:

Idaho State Department of Water Administration
State of Idaho Department of Fish and Game
University of Idaho
Idaho State University
Montana Agricultural Experiment Station
Montana State Water Conservation Board
Nevada Cooperative Snow Surveys
Oregon Agricultural Experiment Station
Oregon Cooperative Snow Surveys
Oregon State Engineer and Corps of
State Watermasters
Utah Cooperative Snow Surveys
Wyoming Cooperative Snow Surveys

Federal:

U. S. Army Engineers

U. S. Department of Agriculture
Forest Service
Agriculture Research Service

U. S. Department of Commerce
NOAA, National Weather Service

U. S. Department of the Interior
Bonneville Power Administration
Bureau of Reclamation
Fish and Wildlife Service
Water Resources Division, Geological Survey
Indian Service
National Park Service
Bureau of Land Management

PUBLIC UTILITIES

The Montana Power Company
Washington Water Power Company
Idaho Power Company
Utah Power and Light Company

ORGANIZED PUBLIC AGENCIES

Big Lost River Irrigation District
Boise Project Board of Control
Little Wood River Irrigation District
Jordan Valley Irrigation District
Salmon Falls Creek Irrigation Company
Twin Falls Soil Conservation District
Twin Lakes Irrigation Company
Big Wood Irrigation Company
Owyhee Project - North & South Board of Control

PRIVATE CORPORATIONS

Amalgamated Sugar Company

*Other organizations and individuals furnish valuable information for
snow survey reports. Their cooperation is gratefully acknowledged.*

UNITED STATES DEPARTMENT OF AGRICULTURE
SOIL CONSERVATION SERVICE

Room 345
304 N. 8TH ST.
BOISE, IDAHO 83702

OFFICIAL BUSINESS

PENALTY FOR PRIVATE USE, \$300
